

# MANAGE INNOVATIVE PROCESSES WITH IQ MANAGEMENT

"Bystanders will be left behind, soon gone," wrote the poet, Jan Neruda. Another well-known statement of his goes, "Whoever knows nothing, must believe everything." In company practice, these still ring true.

## MANAGE PROCESSES EASILY

Most organizations have a sophisticated management system. It typically consists of a combination of rules, directives, responsibilities, and budgets in paper or electronic form. Sometimes, procedures are done in a manner dictated by long-running customs. Information and rules are applied differently in different places and in different forms, with the employees adhering to protocol to varying degrees (if they know them at all). At first glance, it is clear that managing a company in this way is very difficult, even if all the rules and procedures are completely correct. That is why we have launched the IQ Management solution, suitable for small and medium-sized companies, which helps them manage processes more clearly and easily, thanks to electronic documents. The IQ Management system maintains existing processes and is both easy to implement and to operate. It also enables management and control of business processes, including real-time costs based on up-to-date information, which guarantees data security and safe storage of personal data in accordance with the GDPR.

## KEEPING INNOVATION UNDER CONTROL

Without innovation, every company suffers from decay. Today, almost everyone is aware of this, but in practice, innovation is often approached randomly and without clear objectives in place. Therefore, any benefits for the company are usually quite limited. Innovation is as important a process as accounting, and deserves a similarly systematic approach.

As part of the IQ management solution, we use the most modern approaches of Adaptive Case Management in order to gather new ideas and procedures from the entire organization. They are then implemented, with the best ones integrated into controlled processes throughout the business at all levels.

By proceeding this way, you can be sure that no good idea will be lost and the long-term growth of your business maintains a healthy outlook.

## KEY BENEFITS OF USING IQ MANAGEMENT

- The company's management has up-to-date data on the state of the company and can actively influence it
- The information is displayed in a clear, easy-to-read report
- Managerial reports are processed through accounting and budget categories
- The system transfers employee know-how to the entire organization at large
- The user works with a familiar Excel-based interface
- The user only sees relevant information (s)he is approved to see
- All data is secured against unauthorized access
- It is easy to add, share, or edit documents/processes
- Everything is crystal clear thanks to an automated workflow
- Customer satisfaction will improve and the company's economic results will, too

Thanks to the user-friendly, Excel-based IQ Management interface, and the high degree of flexibility afforded by the entire system, it can be implemented without adversely affecting normal operations within the organization. It provides faster and more transparent processes and innovation management, as well as a higher degree of customer satisfaction. Furthermore, current revenues and costs are completely under the control of management, and all data is secured, including GDPR requirements for personal data protection.

## About Us

Business Systems, a. s. has been operating in the European market since 1997, providing our services in the creation and operation of information systems. Our clients can be found in the areas of banking, healthcare, energy, telecommunications, tourism, aviation, manufacturing, and trade. By applying agile programming practices, we ensure rapid delivery of systems, quick adjustment in the case of changes during the development process, and compliance with contractual deadlines and budgets.
