

MAKE PLANS EASILY WITH IQ PLAN

Do you like to do your planning in Excel, but are not keen on all of the manual processing? Do your co-workers return the completed tables with documents on-time, or do they often make changes to them? Does the human element complicate your planning efforts? Plan easily, quickly, and safely with our solution in the spirit of EXCEL+.

TAKE ADVANTAGE OF EXCEL

Excel is the most common tool used in business planning. Almost everyone knows it well, and can handle its interface. So why buy expensive licenses of new software and force users to learn to use another program?

ELIMINATE SHORTCOMINGS

Our solution allows you to use the interface in the form of Excel, supplemented by a plug-in that expands its functions. This ensures a controlled collection of planning documents from diverse collaborators and prevents human error. This way, the planning process is sped up and simplified while user access to data is managed according to security permissions. Also, whoever creates, edits, or deletes any data is recorded through the system's controls. This takes care of the auditability and security of the entire system and makes for a cooperative, auditable, process-driven, and partially-implemented planning tool.

IMPROVE COMPANY MANAGEMENT

Planning is just one of the many processes we help companies get under control. We concentrate on a company's know-how in one place and enable teams from different departments, branches, and centres to work together effectively. We secure sensitive business information and simplify the approval of both purchase orders and maintaining control of budgetary roll-outs. We help manage customer relationships, control internal processes, cash flow, production capacity, and human resources. We can also seamlessly integrate the work of geographically remote branches, or whatever else is necessary.

GET INSPIRED

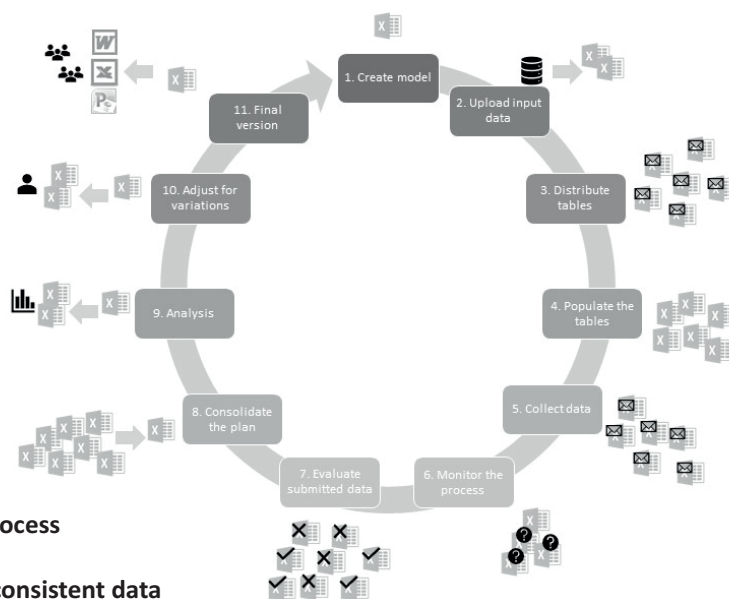

Our solutions work reliably in a number of leading companies and organizations. Among them are the Czech Export Bank, Na Františku Hospital, Air Navigation Services of the Czech Republic, Lasvit and many others. We will be happy to present you with case studies of these projects if so desired.

JUST EXCEL

- Tedious, manual process
- Time consuming
- Prone to errors; inconsistent data
- No process control in place

WITH THE IQ PLAN

- Automated processing
- Simplified data entry and editing
- Rapidly deployed planning
- High level of data security
